

PLANMECA

Planmeca Compact™ i3

Small, swift and clever

We believe that great ergonomics, a smooth workflow and ease of use should be a necessity, not a luxury. The small, swift and clever Planmeca Compact™ i3 is a truly flexible unit that allows both right and left-handed dental professionals to work comfortably in any position.

Simplicity without sacrificing efficiency

Planmeca Compact i3 has been designed to simplify everyday dentistry. Equipped with an intuitive touch panel, the dental unit guides you in your preferred language. Thanks to the simplicity of the unit's design, external infection control procedures are also easy to perform. The unit can be customised to individual preferences and upgraded with the features of your choice, such as an integrated intraoral scanner.

PLANMECA

From right to left in 10 seconds

Planmecca Compact i3 can be switched from right to left-hand use in just 10 seconds simply by moving the instrument console – without having to move the operating light.

This makes it a practical solution for all clinics where several dentists use the same dental unit and space is limited.

A flexible and space-saving solution

Planmecca Compact i3 fits into any clinic layout and offers plenty of working space around it, allowing you to work comfortably whether sitting or standing.

The small instrument console can be positioned above the patient, making it easier to maintain an ergonomic position throughout the day. The unit's swivel function can be used to make fine adjustments according to your preferences.

PLANMECA

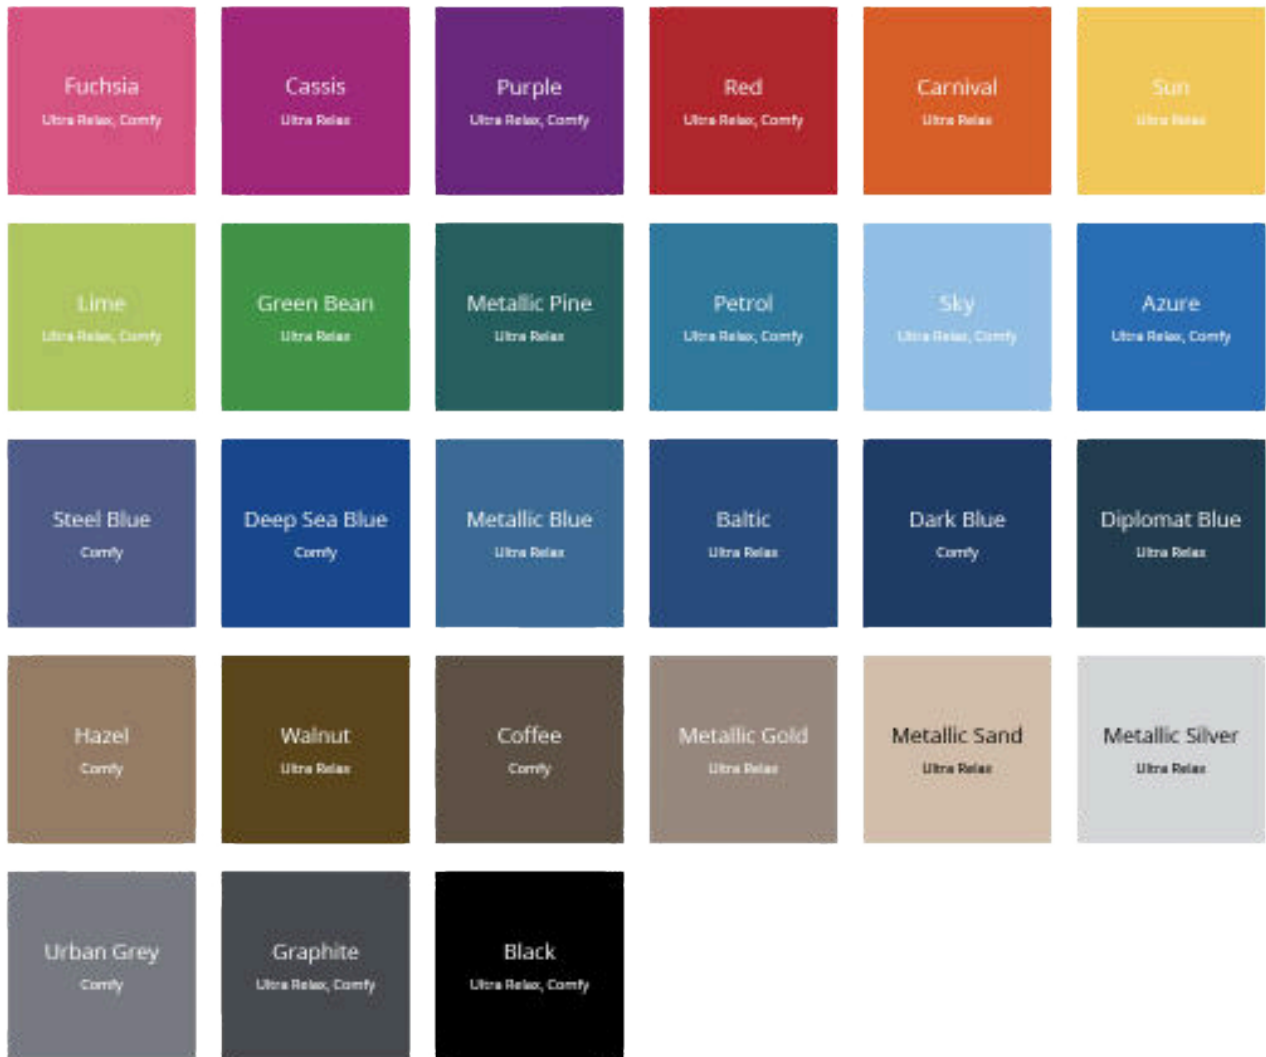

A practical choice especially for large clinics with several users

The dental unit's unique Planmeca PlanID™ sign-in system allows dentists to access their personal settings instantly from any dental unit with a simple flash of a card. This helps clinics utilise their equipment flexibly, since dental units no longer need to be assigned to specific users.

Planmeca PlanID™ is our sign-in system for easy identification on digital Planmeca dental units. It supports an unlimited number of users and allows you to conveniently access your personal settings with a flash of a card.

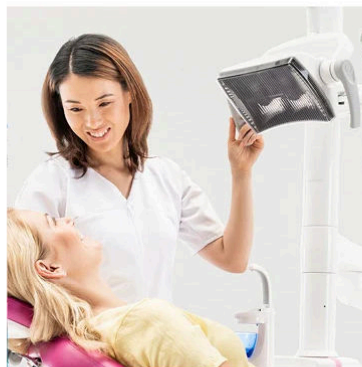

Ideal for larger treatment environments Planmeca PlanID is especially beneficial for dental universities and hospitals, as well as large clinics and chains with many users. With dental units that adapt to the needs of different users instantly, the use of treatment facilities becomes much more flexible and efficient.
